NOTES SECTION: (attach separate sheet if needed).

Watched Shoveler chicks diving, though briefly, completely underwater. Also witnessing altercations between Muskrats and Coots especially, but Am. Wigeons and Blue-winged Teals as well. Usually the muskrat will "goose" the bird underwater and cause a mild panic among parents re. their young. Coots chase the Muskrats but have yet to see them make actual contact.

NOTES SECTION: (attach separate sheet if needed). Western Meadowlark, Short-eared Owl & N. Harrier at slough along Inverlake Road. The Owl was perched on a fence post facing west when a female N. Harrier swooped over the slough then headed to the fence. The Owl crouched, spread its wings, but resumed its position as the Harrier landed on the next post, 2 to 3 metres* down, and faced east. This lasted about 4 minutes then the Harrier flew further south & perched on a post about 35 m. away. It began raining when a Meadowlark perched just 2 posts west of the Owl. This lasted about 2 min. of fair soaking, then the Meadowlark left but both raptors remained huddled facing NW (toward me) into the rain. Both had left when the rain abated some 15 min. later. *[Distances are very much guesswork due to angle and dull visibility.]

Species: [PINE WARBLER] Date: 21 SEP 93

Number: 1 Age: — Sex: ♂

Locality (Exact information if possible): garden of 232 MAPLECOURT CR., CALGARY, ALBERTA T2J-1W2.

Time: 10.30 AM Length of time observed: 15 minutes

Observer: CEDRIC HITCHON

Other Observers: NONE

Who first saw bird?: self

Who first identified bird?: self

Optical equipment used: 7x35 binoculars

Distance to bird: < 50 FT

Weather/Light conditions: sunny & clear / excellent

Was the bird photographed?: no

Comparison species present: Orange Crowned Warblers (10+), 1 Magnolia Warbler ♂

Experience with the species: none in fall plumage. * see note.

Voice and /or call notes: none

Was a field guide used while the bird was under observation?: Yes If so how do you think it might have influenced your decision?: not at all by itself.

Habitat discussion: sparsely foliaged May Day tree.

Behavior: Usual warbler behavior, though not flitting about like Redstart (for ex.)

Are you 100% certain of the identification?: No 98% Are others 100% certain: N/A (but probably not)

How were similar species eliminated?:

Fall plumage:

Townsend's W — total absence of any face patch & tiny eyestripe.

Fall plumage

Black Thr. Green W — should be white underneath & not yellow.

Fall plumage

Prairie Warbler — this species wags it's tail.

Fall plumage

Magnolia — Yellow rump, white tail band. One was in same tree for comparison. Quite a different bird in behavior

DESCRIPTION: Write a detailed description. If you are not familiar with all of the terms used to describe a bird see your field guide topography page and try to describe each part of the unusual bird. Get as much information down as possible as to shape, colour, patterns, unique features, etc. SKETCH the bird and show as much detail as possible.

Pros

- Upperparts uniform greenish
- 2 prominent white wing bars
- White undertail coverts
- chin & rest of underparts yellow (yellowish - not bright yellow like Wilson's), faintly streaked on sides
- faint eyestripe over eye but no discernable face patch

Cons

- Presence of tail spots not positively established. Bird kept to above eye level. Looked hard for them.
- Any rare fall warbler is a question mark!

* Note

- On 14 Sep 84 I saw an identical (as far as I can remember) warbler in S.E. Calgary along the Bow River. I called this one a ♂ Pine Warbler too. (but 2 wrongs don't make a right)
- ♂ Pine Warbler seen as recently as this spring in Toronto (May). No trouble here of course since all warblers in spring plumage (including Black Thr. Green & Magnolia). Nevertheless, the similarity was there.

Species: OLDSQUAW Date: JULY 18/93

Number: 1 Age: Sex: FEMALE

Locality (Exact information if possible): NAMAKA LAKE, EAST END.

Time: 9:30, AGAIN AT 10:30 Length of time observed: 10 MINUTES

Observer: ANDREW SLATER

Other Observers: NONE

Who first saw bird?:

Who first identified bird?:

Optical equipment used: 20X TELESCOPE

Distance to bird: 250 METRES

Weather/Light conditions: SUNNY

Was the bird photographed?: NO

Comparison species present: SHOVELER, MALLARD, COOT

Experience with the species: SEEN MANY TIMES

Voice and /or call notes: NONE

Was a field guide used while the bird was under observation?: NO If so how do you think it might have influenced your decision?:

Habitat discussion : CALM SURFACE OF NAMAKA LAKE.

Behavior: ONLY SEEN SWIMMING

Are you 100% certain of the identification?: YES - IF THIS HAD BEEN OCTOBER! Are others 100% certain:

How were similar species eliminated?: WOOD DUCK: WHITE PATCH AROUND EYE WAS TOO LARGE AND WRONG SHAPE; BILL WAS TOO STUBBY; NECK WAS TOO SHORT; BIRD WAS TOO SMALL; UNDERPARTS WERE TOO WHITISH; JIZZ WAS THAT OF OLDSQUAW, NOT WOOD DUCK. THIS BIRD OCCASIONALLY "CROUCHED LOW" IN THE WATER, AS I HAVE SEEN OLDSQUAW DO, BUT NOT WOOD DUCK. I DID NOT SEE THE BIRD DIVE, OR FLAP ITS WINGS.

I CANNOT THINK OF ANY OTHER SPECIES THAT I COULD HAVE BEEN CONFUSED BY! BOTH TIMES I SAW IT, I IMMEDIATELY THOUGHT "OLDSQUAW".

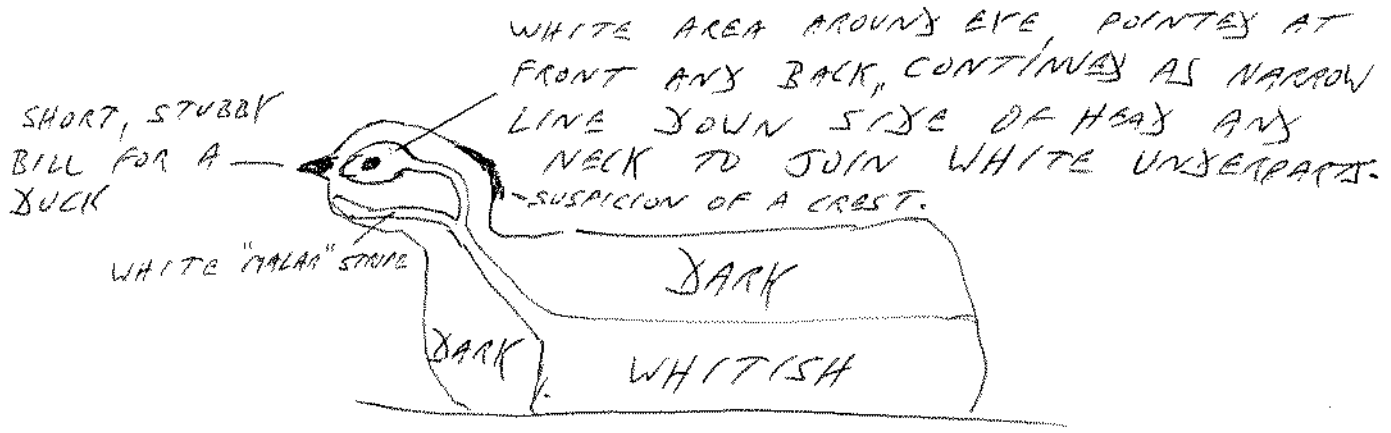
DESCRIPTION: Write a detailed description. If you are not familiar with all of the terms used to describe a bird see your field guide topography page and try to describe each part of the unusual bird. Get as much information down as possible as to shape, colour, patterns, unique features, etc. **SKETCH** the bird and show as much detail as possible.



At 9:30 I noticed a small duck in the distance that looked like an Oldsquaw. I thought this was impossible at Nanaha Lake in July and assumed it must be a juvenile of some other species.
At 10:30 I saw the same bird again, much closer, at 250 meters. It was smaller than nearby Mallard and Shoveller, about the same size as nearby Coot. It had a short, stubby bill, but was definitely a duck. It had a prominent diamond-shaped patch around the eye, pointed at front and rear, that joined a narrow, curved white stripe down the side of the head and neck. There was also a white line on the lower part of the face, like a malar stripe.
The upperparts were plain dark, a grey-brown. The breast and the underparts were whitish.
There was a suggestion of a crest hanging from the back of the head.
I did not see the wings extended. They appeared all-dark while swimming.

DESCRIPTION: Write a detailed description. If you are not familiar with all of the terms used to describe a bird see your field guide topography page and try to describe each part of the unusual bird. Get as much information down as possible as to shape, colour, patterns, unique features, etc. SKETCH the bird and show as much detail as possible.

Warbler was first seen by Kathy Huene at approximately 2 pm on Oct 21/93. She watched it gleaning aphids off of a tree in her yard for around half an hour. The bird didn't appear to be disturbed by her presence at all. I observed it with her at 4:30 pm when it flew back to the same tree & began feeding.

Mrs Huene observed the same bird in her back yard ~~at~~ on Oct 22, bathing in the bird bath. The warbler returned to the birch tree & was sighted by John McFaul @ 10:00 am & @ 11:30 am by Rodger Dunn & Mary Couglin & @ approx 5:30 pm by Jean Dunn.

Oct 23 a.m - Mrs Huene observed bird in yard.

Description :- slate grey-blue back & top of head.
- black on face, extending on to chest
- white belly, (in certain light looked cream-coloured
- wings with 2 white wing patches
- tail spots obvious under tail

(Warbler spent quite a bit of time on trunk of tree & some of larger branches, on the lower 1/3 to 1/2 of tree.)

NOTES SECTION: (attach separate sheet if needed).

Male in small bushy shelterbelt near small farmyard (house actually a trailer) male made multiple attempts to copulate with female but too small territory here for breeding. Impressive construction of all on main Oates almost all Rough-legs immature except for 1 dark-morph - all Redtails were in the air together riding thermals

NOTES SECTION: (attach separate sheet if needed)

① Seen feeding with flock of Yellow's (given same size as Baird's but plumper; plumage still mottled, pointy-grayish supercilia, some breast streaking but not much; bill straight and shorter. Then Baird's: dark cap contrasted with pale nape; bird flew and showed white rump clearly with 22" wide angle slope (distance 40-45 yards). ② One seen in yard by House Sparrows from behind but only view of head; one seen flushed with orange at 40 yds (yellowish, quiet under wing of goose & beige), bright much more streaked than Lesser or Swainson's Thrush; upper parts olive brown and gray tones more prominent than Swainson's 'sandy' brown; not strong like Veery's. No apparent eye ring or bud seen from behind.

Bird Record Sheet

Please print information legibly.

- GIVE EXACT LOCATION. Fill in a new column for each location visited.
- List the number of each species seen at each location by sex and/or age where they are determinable, otherwise list total number.
- CIRCLE all nesting records and elaborate in "Notes Section" at the end.
- Provide more details in "Notes Section" on species marked with an ASTERISK '*' (ie: field marks, habitat, voice, behavior).

NOTES SECTION: (attach separate sheet if needed).

① Seen in separate locations ② seen at range of 10 yards, marked superciliary brownish-olive (tail not yellow). Larger eye than Swainson's, no yellow only since spectacular "buffy" & "Slatter" leg. Thought Swainson's different habitat compartment. Bird flushed in gully through semi-boggy densely shrubbed area near Creek

DESCRIPTION: Write a detailed description. If you are not familiar with all of the terms used to describe a bird see your field guide topography page and try to describe each part of the unusual bird. Get as much information down as possible as to shape, colour, patterns, unique features, etc. SKETCH the bird and show as much detail as possible.

As I was about to leave Eagle Lake Park, a medium/large heron-like bird flew up from the slough across the road. It had a long neck and long legs, but was at first only in silhouette.

It flew West, passing almost directly over me and revealed all-white plumage, with a stout yellow bill and long, trailing, all-black legs and feet. By now its neck was drawn in.

Size was difficult to judge, but I would say it was about 70% the size of a Great Blue Heron

Bird Record Sheet

Please print information legibly.

- GIVE EXACT LOCATION. Fill in a new column for each location visited.
- List the number of each species seen at each location by sex and/or age where they are determinable, otherwise list total number.
- CIRCLE all nesting records and elaborate in "Notes Section" at the end.
- Provide more details in "Notes Section" on species marked with an ASTERISK '*' (ie: field marks, habitat, voice, behavior).

Species: CARDINAL Date: NOVEMBER 07, 1993

Number: 1 Age: ADULT Sex: FEMALE

Locality (Exact information if possible): ~~CENTENNIAL~~ CENTENARY PARK, NEAR WEST END, ON NORTH SIDE.

Time: 11.15 Length of time observed: 15 MINUTES

Observer: ANDREW SLATER

Other Observers: —

Who first saw bird?: —

Who first identified bird?: —

Optical equipment used: 8x BINOCULARS

Distance to bird: 20 FEET

Weather/Light conditions: BRIGHT CLOUDY

Was the bird photographed?: NO

Comparison species present: NONE

Experience with the species: SEEN MANY TIMES

Voice and /or call notes: REPEATEDLY GAVE SHARP ALARM NOTE "PIC, PIC"

Was a field guide used while the bird was under observation?: NO If so how do you think it might have influenced your decision?:

Habitat discussion : IN SHRUBBERY. ONCE FLEW UP INTO A POPLAR

Behavior: FEEDING ON WILD BERRIES. VERY WARY

Are you 100% certain of the identification?: YES Are others 100% certain: —

How were similar species eliminated?:

The only other species it could be is some other kind of cardinal. At the moon there are many captive Red-crested Cardinals from Brazil but in no plumage does that species resemble this bird, and is also much smaller.

It appears to me to be a wild, adult female Northern Cardinal
