A SINGLE BIRD ON THE FRINGS OF A SMALL FLOCK OF BLACK CAPPED CHICKADEES BUT SEPARATE FROM THEM AND NOT FEEDING OR FLYING WITH THEM. LOOKED VERY SIMILAR TO THE PICTURE IN N. GEO FIELD GUIDE 2ND EDN. P. 313. THE CHESTNUT BACK, RUMP - FLANKS APPEARED VERY BRIGHT AND THE SAME COLOUR OVERALL. THE BURGAL CHICKADEE PICTURE IN THE GOLDEN GUIDE P. 229 HAS A MUCH DARKER BROWN BACK ALTHOUGH THE FLANKS ARE A SIMILAR CHESTNUT COLOUR. THE EXTENT AND BRIGHTNESS OF THE CHESTNUT COLOURING WAS TOO MUCH TO BE A BURGAL CHICKADEE.

Birdwatchers,

While out on the May Species Count this morning at Alberta Research Council, Vegreville, Alberta, Carl Grosfield and I happened upon one male Blue-winged Warbler, *Vermivora pinus*. This is an eastern species which normally does not move any farther northwest than Minnesota. According to "Warblers, Peterson Field Guide", it is a vagrant up this way, with one Fall record in Alberta and four records in Saskatchewan. It was perched and flying about in a blooming ~~Blueberry~~ which was growing along the south edge of a parcel of poplar bush bordering pasture. The weather was cool, rainy and windy, but the trees blocked the wind, creating warmer, quieter conditions, compared to the northern side of the trees.

We were watching two Alder Flycatchers when we noticed this little warbler which was unfamiliar to us, about 15 metres away. The field marks we noted were 1. black line through the eye, 2. yellow forehead, throat and belly, 3. white undertail coverts, 4. diffuse, white wing bars on gray wings, and 5. olive back and nape. At times, it would hang upside-down on a branch to search for insects among leaves and flowers. And occasionally fly out a short ways, then back to the same bush.

Upon checking field guides, we found it was the Blue-winged Warbler. This was a definite highlight for a rainy "bird count" morning!

Rob Hughes
Vegreville, Alberta, Canada
rob@arc.ab.ca

when I returned the next day, I found
the bush, which the warbler was feeding in,
was actually a willow. R.B. Hughes.

DESCRIPTION: Write a detailed description. If you are not familiar with all of the terms used to describe a bird see your field guide topography page and try to describe each part of the unusual bird. Get as much information down as possible as to shape, colour, patterns, unique features, etc. SKETCH the bird and show as much detail as possible.

A largest gull, slightly larger than California, noticeably smaller than Herring. Plumage dirty white throughout (white streaked with light brown). This included upper primaries and tail. Lower primaries, seen in flight, were pure white. Bill was black on outer half, blackish-pink on inner half, with light pink at the base. Head was small, appeared rounded at times, more angled at others. (A strong wind was blowing) Neck was long and fairly slim for a bird this size.

Primaries projected past tail about 2 inches, i.e. slightly more than the length of the bill. Legs were pale pink.

Overall impression was of a long-winged, long-necked, small-headed gull, rather like a large Mew Gull in jizz when swimming. While I have definitely seen Iceland and Thayer's Gulls with smaller bills than this one had, the overall jizz was right for an Iceland.

Weather/Light conditions: OVERCAST SKIES WITH SPORADIC VERY LIGHT SNOW/WITH CLEAR PER
Was the bird photographed?: NO! MORES THE PITY PURING OBSERV.
Comparison species present: THERE WAS AN IMMATURE BALD EAGLE SIGHTED MOMENTS LATER
Experience with the species: NONE ONLY PICTURES. Looking 1/2 THE SIZE
Voice and /or call notes: NONE
Was a field guide used while the bird was under observation?: YES If so how do you think it might have influenced your decision?: IT CONFIRMED THE SIGHTING
Habitat discussion: BIRD SHOULD BE IN HIGH DRY MOUNTAINS, NOT @ BEAVER HILL LAKE
Behavior: BIRD HAD VERY STABLE FLIGHT WITH SLOW DELIBERATE WING BEATS.
Are you 100% certain of the identification?: YES Are others 100% certain: YES
How were similar species eliminated?: INITIALLY I THOUGHT IMMATURE BALD EAGLE
THEN TO TURKEY VULTURE BUT WHITE AREA OF UNDER WING COVERTS
WAS WRONG FOR THE TURKEY VULTURE PLUS THE WING PLANE
WAS VERY FLAT. THEN I THOUGHT BACK TO IMMATURE BALD EAGLE
BUT AS THE BIRD FLEW OVERHEAD ITS SHEAR SIZE AND THE
"FINGER LIKE" PRIMARIES IN CONJUNCTION WITH THE UNDER WING LININGS
& COVERTS AND GREYISH LEGS SAID THIS HAD TO BE A CONDOR.
I WAS AWARE THAT CONDORS HAVE BEEN RELEASED WITH ANDEAN CONDORS
BUT THAT SPECIES WAS LATER DISCARDED AS A POSSIBILITY BECAUSE
THE BIRD DID NOT HAVE A WHITE COLLAR AND THERE WAS THE WHITE UNDER WING
AREA, WHERE AS THE ANDEAN CONDOR HAS A BLACK WING VIEW FROM BELOW.
THE BLACK VULTURE WAS ALSO RULED OUT AS I AM VERY FAMILIAR WITH
THIS BIRD AFTER A LONG STAY IN S. AMERICA.

Scissor-tailed Flycatcher near Water Valley, AB

by Doug Collier
3426 Lane Cres SW
Calgary T3E 5X2

One adult initially discovered at 1315-hrs on 10 June 2000 (Saturday) on power lines along Hwy22 approximately 100-m south of Dogpound turnoff (10.4-km ESE of Water Valley) near oilfield facility signed Shiningbank 5-11-29-4w5. Chased bird for 45 minutes taking photos with Olympus ON-2 with 200-mm lens and 400 ASA film. Bird moved E into vegetation and then north on to fenceline along N side of access road to above-mentioned facility (approximately ¼ mile E of Hwy22). 10x40 Zeiss binoculars were used to observe bird when not photographing.

Tail feathers longer than body and enlarged at distal end. White on tail feathers apparent during flight. Overall plumage light gray with darker gray wings. Some, but not much, pinkish blush on sides of breast and in axillar area.

I left bird at 1400 and immediately contacted Peter Sherrington and Bill Wilson who put the bird on the rare bird alert. Apparently Ray Wershler re-found the bird on 12 June A.M. Others observed the bird later on 10 June.

My attention was drawn to the bird by its very distinctive song, which was completely new to me. It took me 30 minutes to get a view of the bird up close, description as follows.

Pale grey breast and face, with conspicuous white eye-ring and bright pink bill. Some Rufous, upper back more dark brown, rump pale ^{grey} brown ~~grey~~. Tail dark brown. No streaks or stripes on the head, breast or underparts.

On June 11, 2000, I passed the same spot again, and the bird was still singing consistently at 5-30 A.M. and less consistently at 9-00 A.M.

Brown back with dark streaks. The 'chip' call was huskier than a Chipping Sparrow. It gave this call alot as it flew from bush to bush. Gave the 'normal' song with 4 or 5 notes followed by a trill many times. Gave a variation of this song (also taped by Wayne) which had more trills + notes, sort of a shorter, less buzzy version of a Brewer's Sparrow song. The gray phase with the distinct eye-ring + the reddish crown were seen from quite a distance and are very distinct. The bill was very bright, seemingly an orange-pink color. The legs were pink.

Also saw the bird again on June 9 with John Riddell + Lynn Vogt. Bill looks more orange than pink. Very gray-headed - hard to see the light eye line.

LOCATION OF SIGHTING: Elizabeth Hall Wetlands, a riverine park located within the City of Lethbridge, Alberta

TIME: 2:00 pm and again at 7:00 pm **LENGTH OF TIME OBSERVED:** 70 minutes in afternoon, 30 minutes in evening

HABITAT: An old oxbow of the Oldman River with reeds lining most of the shore.

BEHAVIOR OF BIRD: Most of the time it was feeding in shallow water and on shore (catching damselflies). Several times it raised its head crest and bobbed its tail. It flew a short distance, with neck crooked and legs trailing.

OBSERVER(s): Douglas & Teresa Dolman in afternoon, and a total of ten people in the evening.

DISTANCE TO BIRD: Approximately 15 - 40 meters

OPTICAL EQUIPMENT USED: Swarovski 7x42 and 8x30 binoculars and a Kowa spotting scope.

WHO FIRST SAW BIRD? The heron was first discovered on June 4 by birders unknown to us. These birders notified a friend who in turn called Linda Cerney, who e-mailed ourselves along with other Lethbridge birders, on June 5. We went to look for the heron on June 6, 2:00 pm and returned at 7:00 pm with other birders. The last sighting of the heron was apparently after 9:00 pm, Wednesday June 7.

WHO FIRST IDENTIFIED BIRD? The persons unknown who first saw the bird on June 4.

WEATHER AND LIGHTING CONDITIONS? Fair weather, good lighting.

WAS THE BIRD PHOTOGRAPHED? Yes in CENS collection
VOICE/CALLNOTES? none

COMPARISON SPECIES PRESENT? No other herons present. The only other waders present were spotted sandpiper and killdeer.

EXPERIENCE WITH SPECIES? We have observed the species previously in Texas.

WAS A FIELD GUIDE USED WHILE THE BIRD WAS UNDER OBSERVATION? Not initially. Field notes were taken before consulting the field guide. However we had looked at a field guide a few hours before going to see the bird.

IF SO, HOW DO YOU THINK IT MIGHT HAVE INFLUENCED YOUR DECISION? Consulting the field guide beforehand gave us an idea of what characteristics to look for. However minor points of identification had been forgotten by the time we arrived at the site.

ARE YOU 100 % CERTAIN OF THE IDENTIFICATION? Yes

HOW WERE SIMILAR SPECIES ELIMINATED? Herons expected locally were easily eliminated (Great Blue Heron by size and Black-crowned Night Heron by colour pattern and size). Little Blue Heron was eliminated by size, neck length and colour of legs and feet.

Bird observed with 10x56 Zeiss binos

My Initial impression was that the bird was a large Zonotrichia sparrow when it flushed from the grass and landed in ~~front~~ years dried out Cirsium plant. Initially I could only see the ~~green~~ tail and back of the bird. As the bird moved to the other side of the plant I could see the chestnut redish brown crown, white throat pattern with dark malac stripe, the white lores and conical bill. The face and upper chest were grey and the lower abdomen was pale in colour.

Birder's Journal

Oshiwa, Ontario

Dear Sir/Madam:

Lynn Voght of the Wildlife Information Office at the Inglewood Bird Sanctuary in Calgary suggested that I provide you with the enclosed recent photos of nesting Caspian Terns which were taken on High Island at Lac La Biche.

According to the Federation of Alberta Naturalist's Field Guide to Alberta Birds, "the Caspian Tern is consider very rare in the province and is on Alberta's Yellow List. To small colonies are known in two widely separate areas".

We may have a third colony.

Sincerely,

Tom Maccagno, President
