RECORD FORM FOR UNUSUAL BIRD SIGHTINGS

ENTERED 11 Sept. 1999
PROOFED Sept 14 1999 OR

SPECIES: Nashville Warbler (*Vermivora ruficapilla*)

DATE: June 5, 1999

NUMBER: 1

AGE/SEX adult male

LOCATION OF SIGHTING: Waterton Lakes National Park. Chief Mountain Highway (Highway 6). Approximately 0.5 km north of the turn off to the Belly River Campground. Alternatively, approximately 150 meters south of a highway pullout with an interpretive sign: "Blood Indian Timber Reserve". The warbler was heard on both sides of the highway but mostly on the East side.

TIME: 6:40 am

LENGTH OF TIME OBSERVED: 35 minutes

HABITAT: Mixed deciduous/coniferous woodland with considerable understory and some running water. The warbler, when seen, was in poplar trees.

BEHAVIOR OF BIRD: Singing and moving from tree to tree. Much of the time it sang but was hidden from view.

OBSERVER(s): Douglas & Teresa Dolman

DISTANCE TO BIRD: Approximately 15 - 20 meters

OPTICAL EQUIPMENT USED: Swarovski 7x42 and 8x30 binoculars

WHO FIRST SAW BIRD? Douglas Dolman

WHO FIRST IDENTIFIED BIRD? Teresa Dolman

WEATHER AND LIGHTING CONDITIONS? Clear and relatively calm. The sun had risen but the area in question was still in shadow; but nevertheless quite well lit.

WAS THE BIRD PHOTOGRAPHED? No

VOICE/CALLNOTES? Actively singing

COMPARISON SPECIES PRESENT? Warbling vireo, yellow warbler, yellow-rumped (Audubon's) warbler and Wilson's warbler were present in the immediate area while MacGillivray's warbler, common yellowthroat and northern waterthrush had been heard and/or observed in the Belly River Campground not far away earlier in the morning.

EXPERIENCE WITH SPECIES? We have observed the species previously near Sparwood B.C. and in the Okanagan Valley.

WAS A FIELD GUIDE USED WHILE THE BIRD WAS UNDER OBSERVATION? No

IF SO, HOW DO YOU THINK IT MIGHT HAVE INFLUENCED YOUR DECISION?

ARE YOU 100 % CERTAIN OF THE IDENTIFICATION? Yes

HOW WERE SIMILAR SPECIES ELIMINATED? Our attention was attracted to the bird because we did not recognize its song. We are familiar with the songs of all the warblers and vireos normally found in the area and this was clearly different. Although we have heard the song of the Nashville before we have not learned to recognize it.

The bird had a bright yellow throat and breast without streaking or any other colour, which eliminated warbling vireo, MacGillivray's warbler, yellow-rumped warbler and northern waterthrush. It had a grayish face and cap and a whitish eye-ring which eliminated yellow warbler, Wilson's warbler and common yellowthroat.

Lynn,

This record has been forwarded to me from Roy Fairweather. It deals with the Eastern Bluebird that is currently nesting near Beaverhill Lake at an undisclosed location. Apparently, it is mating with a Mountain Bluebird female.

Bird Description:

Medium sized wading birds with dark redish/bronze head, neck and back. Wings were iridescent dark green and purple. Bill was pinkish/grey long, thick and decurved. Pink facial patch was surrounded by a border of white

feathers. Legs long and pinkish. Eyes were red. One was obviously larger. The colours of the smaller of the two were somewhat more muted. That is why I suspect it was pair. They flew with outstretched necks. The decurved bill was obvious at all time. Photographs and a drawing of one bird will be published in the next Alberta Naturalist.

Thanks Lynn for the clarification. I will try and write something up for the Birder's Journal.

The Ibis citation is:

Goossen, J.P., D.M. Ealey, H. Judge and D.C. Duncan. 1995. Distribution and Breeding Status of the White-faced Ibis (*Plegadis chihi*) in Canada. The Canadian Field Naturalist 109:391-402.

It lists all sighting records since the first sighting in 1941.

Thanks also for the names of the committee. I personally know all except one of them so contacting them won't be a problem.

RECORD FORM FOR UNUSUAL BIRD SIGHTINGS

SPECIES: Chestnut-backed Chickadee (*Parus rufescens*)

DATE: January 31, 1999

NUMBER: 1

AGE/SEX: Unknown

LOCATION OF SIGHTING: Town of Waterton in Waterton Lakes National Park

TIME: 11:45 AM and 3:00 PM **LENGTH OF TIME OBSERVED:** 1-2 min. & 0.5 min respectively

HABITAT: Treed front yards with bird feeders in two neighbouring properties.

BEHAVIOR OF BIRD: On first occasion landed on roof of a house moving around two or three times. On second occasion it was on the snow feeding under a bird feeder in neighbouring yard.

OBSERVER(s): Teresa and Douglas Dolman on both occasions. On second occasion also observed by Janice Smith, WLNP naturalist and occupant of second residence with feeder.

DISTANCE TO BIRD: First observation: 30-40 feet; Second observation: 15-20 feet.

OPTICAL EQUIPMENT USED: 7x42 and 8x30 Swarovski binoculars.

WHO FIRST SAW BIRD? Teresa Dolman (The presence of the bird in Waterton had been reported to us earlier in the day by Fraser Smith who had seen it in the area where we observed it and by Terry Hammell who had been told of it by another resident of the town, Beth Russell. FS also reported that it had been seen at the van Tighem residence.)

WHO FIRST IDENTIFIED BIRD? Teresa Dolman

WEATHER AND LIGHTING CONDITIONS? Sunny with 25 km/hr wind. We were looking generally towards the direction of the sun.

WAS THE BIRD PHOTOGRAPHED? NO **VOICE/CALLNOTES?** None

COMPARISON SPECIES PRESENT? Both Mountain and Black-capped Chickadees were present.

EXPERIENCE WITH SPECIES? Have observed the species many times on Vancouver Island where it is generally the only species of Chickadee seen. We have seen it at Waterton at least twice before.

WAS A FIELD GUIDE USED WHILE THE BIRD WAS UNDER OBSERVATION? No.

IF SO, HOW DO YOU THINK IT MIGHT HAVE INFLUENCED YOUR DECISION? N/A

ARE YOU 100 % CERTAIN OF THE IDENTIFICATION? Yes

HOW WERE SIMILAR SPECIES ELIMINATED The chestnut colouring on both back and sides gives the species a darker appearance than any of the other three likely contenders - Black-capped, Mountain or Boreal Chickadee. The lack of a white eyebrow clearly eliminated Mountain Chickadee. The other two were eliminated by the strength of the chestnut colouring on the back and sides. The B.C. and Boreal Chickadees can have rufous colouring on sides but not to the same degree. Additionally, the Boreal does not have as dark a cap as was observed.

NOTES SECTION: (attach separate sheet if needed).

* 28 Feb. N. Pyrrhuloxia. A single bird (Pyrrhuloxia or Say's Phoebe) was calling at 19:30 pm in deciduous woods at foot of hill. Call was fast and high pitched - not staying at any place for long! Call did not resemble either species according to tapes. we have - tapes seem to attribute sound to both species.
